CONTRIBUTION JOURNAL

1. JENNIFER R.

For contribution for lab 7, I first start having everything prepared in GitHub, with a separate repository as per required for the assignment along with a folder where every team member can add their collaboration and keeping everything organized. Then I worked on the Lab 7 notebook and help correct any errors that were presented while also reviewing the notes and understanding the tools that were presented to us. I also help prepare the files together and make them ready in GitHub while keeping everyone in check.

2. SAFA B.

I completed the Knowledge Check by explaining when precision or recall is more important and why cross-validation gives a more reliable model evaluation than one train-test split.

3. MARTIN H.

I contributed by helping complete the Lab 7 notebook and answering the knowledge check questions being given while collaborating with my team members.

4. MARCUS W.

Tested code in a separate private environment to ensure results were consistent, for a better understanding of the material, and to be more efficient. Reviewed submitted documents and contributed to journals.

5. ZAYAAN A.

I contributed to the team by reading through the lab instructions, communicating with my teammates, and making sure we understood what needed to be completed. I completely my tasks & our team focused on their important tasks while also helping each other when needed. By communicating and sharing the work, we were able to stay organized and complete the lab as a team.
